

Delaware Leg Positioning Bed

The Delaware is a multi-functional leg positioning bed with 4 section profiling, high low. Featuring the ultimate unique kneebreak for leg positioning in bed. Designed to give multiple leg positions the Delaware allows you to take your legs into a negative, below horizontal, position whilst the independent actuators allow the fine adjustment of the kneebreak. With heels down, the Delaware is suitable for someone with contracted legs giving a chair like position yet still benefiting from being a bed.

The Delaware makes transferring of legs into bed, drainage and positional change easier. The end section of the bed when dropped into a negative position, down as low as 10 inches makes it easier to transfer legs into bed. Without doubt, this bed is all about the kneebreak.
